December 2010

Get the detector with sensors that last five full years, not 18 months

Save thousands
with Dräger sensors that
last five years.

It's a mistake to overlook something as small as a sensor when buying gas detectors.

That's because the cost to purchase a gas detector is only a fraction of the cost to operate one.

You may not even realize it, but sensor replacement over time costs you thousands of dollars in sensors, labour, calibration, and downtime. At Dräger, we believe a quality sensor needs to be more than just accurate. It should last too.

To prove it, the electro-chemical sensors found in the X-am® 2000 are now standard with a 5-year warranty, the longest on the market. The Pac® 7000 is also available with a 5-year warranty, again the longest on the market.

So, isn't it time to start thinking small and saving big?

Go to www.draeger.com/sensorsavings to see how much you could be saving.

For additional information please contact Manish Gupta or your local sales manager.
